

Existing site plan

Scenario 2

Retention of the Salisbury Villas with new development to the rear

This scenario retains and refurbishes the Salisbury Villas, with larger new building placed in the back gardens. This would create flexible, new-build floor space across medium-sized floor plates, in an attractive environment with a unique character.

Layout

The new buildings, likely commercial in use, would be free-standing, but connected to the villas through linking elements. Building footprints could vary to allow some of the more significant trees to be retained.

The existing villas could be refurbished to comprise reception rooms, meeting rooms, break out spaces, celluar offices and other supporting facilities.

Access

Entrances to the new buildings could be in-between the existing villas. Linking elements with stairs and lifts could serve both the new buildings and the existing villas, potentially making them fully accessible. There is also an opportunity for a building to front on to Tenison Road, potentially incorporating an entrance.

Building height

The new buildings might rise to 4 or 5 storeys, but incorporating lower elements at the rear to mitigate the impact on the neighbouring residential properties. Basements could be introduced to gain floor space.

Public realm

The forecourt area would comprehensively re-landscaped as a new linear public space with all the lime trees along Station Road retained.

- up to 16,000m² of floor space
- 3,000m² of public realm
- up to 1,250 jobs¹
- £75m capital investment¹
- £65.7m GVA² (how much each person adds to economy)
- **0.19 carbon per person**³ (tonnes of CO₂e per person per year)

1. Jobs and capital investment figures are based on broad estimates of office densities and construction costs on a m2 basis.

2. Based on data from the from the ONS: 252,587 per year per full-time equivalent employed person (FTE).

3. Operational emissions intensity per year per person working on the site (CO2e/FTE) excluding embodied carbon. Taken from Hoare Lea's Initial Carbon Analysis.

There is an opportunity for a new building to front on to Tenison Road

Illustrative view between two of the villas showing how the new buildings behind might be accessed

Scenario 3

Demolition and redevelopment of the Salisbury Villas

This scenario envisages the demolition of the Salisbury Villas to create large development plots for a series of new buildings. This scenario delivers the most new floor space overall, due to the potential for more height facing Station Road – potentially in large, optimally-sized floor plates.

Layout

New buildings could be arranged either as series of standalone new buildings with gaps in-between or as a terrace of buildings with party walls. Building layouts could be designed to create optimal floor plates. There is an opportunity to move the building line facing Station Road slightly further forward closer to the road, while still retaining the avenue of lime trees and the potential for generous public realm.

Access

Access would be from Station Road via the forecourt area, which would comprehensively re-landscaped as a new linear public space.

Building heights

The buildings might rise to 5 or 6 storeys facing Station Road, but step down to 3 storeys at the rear to mitigate the impact on the neighbouring residential properties. Any rooftop plant could be set back significantly to minimise its impact in long range views. Basements with lightwells could be introduced to gain floor space.

Public realm

The forecourt area would comprehensively re-landscaped as a new linear public space with all the lime trees along Station Road retained.

- up to 24,000m² of floor space
- 3,000m² of public realm
- up to 1,800 jobs¹
- £100m capital investment¹
- £94.6m GVA² (how much each person adds to economy)
- **0.18 carbon per person**³ (tonnes of CO₂e per person per year)

1. Jobs and capital investment figures are based on broad estimates of office densities and construction costs on a m² basis.

2. Based on data from the from the ONS: \$52,587 per year per full-time equivalent employed person (FTE).

^{3.} Operational emissions intensity per year per person working on the site (CO2e/FTE) excluding embodied carbon. Taken from Hoare Lea's Initial Carbon Analysis.

Illustrative view showing the potential for new public realm and green space along Station Road

We have appraised each scenario against its potential to deliver on the Councils' four 'big themes' and three priorities - jobs, infrastructure and homes

Assessment of the scenarios

Local plan consultation

Cambridge City and South Cambridgeshire District Councils are preparing a new joint Local Plan which will affect the future of Greater Cambridge over the next 20 years. The Councils are carrying out a public consultation called "Greater Cambridge Local Plan – The First Conversation: Issues and Options 2020". This consultation is intended to provide a positive vision for the future of Greater Cambridge.

In order to balance many competing priorities and issues, the Councils have identified four 'big themes' that will influence how they deliver on their priorirites. These are:

- Climate change how the plan should contribute to achieving net zero carbon, and the mitigation and adaptation measures that should be required through developments.
- Biodiversity and green spaces how the plan can contribute to our 'doubling nature' vision, the improvement of existing and creation of new green spaces.
- Wellbeing and social inclusion how the plan can help spread the benefits of growth, helping to create healthy and inclusive communities
- Great Places how the plan can protect what is already great about the area, and design new developments to create special places and spaces.

Left: The Councils' four 'big themes' and priorities for delivery - jobs, infrastructure and homes

Assessing the scenarios

In order to assess the scenarios in a rounded and balanced way, we have appraised each scenario against its potential to deliver on the Councils' four 'big themes' and three priorities - *jobs, infrastructure and homes* (please note that the priority '*homes*' has been excluded at this stage, as it is considered unlikely that the site will make a contribution in this area).

Included overleaf is a summary table of our assessment. Clearly there is scope for interpretation, but in order to establish a broad synopsis for discussion, we have given each category a green, amber or red ranking (green = high potential, medium/mixed potential, red = low or no potential), based on our more detailed assessment. This table therefore offers an approximate summary of how each scenario might perform.

Please also refer to the full version of this assessment, which contains further detail to support the assessment in each category.

	Climate Change	Mitigating climate change	Embodied carbon	Reducing embodied energy and carbon in materials and from construction
			Materials	Encourage responsible sourcing of materials in the construction process.
			Operational emissions	Ensuring development is energy and carbon efficient over their lifespan
			Passive design	Measures to improve carbon performance without adding to operational emissions
			Energy efficiency	Reducing operational emissions through the use of energy efficiency building services
			Energy generation	Promoting renewable and low-carbon energy generation
			Retrofitting	Retro-fitting existing buildings to be more energy efficient
			Carbon off-setting	Investigating carbon offsetting through measures such as afforestation (tree planting)
			Transport	Promoting travel by low-carbon modes, such as walking, cycling and public transport
		Adapting to climate change	Flood risk	Ensuring safety from flooding by mitigating run-off and integrating sustainable drainage
	_ <u>E</u>		Overheating risk	Designing buildings that are easy to keep cool without relying on air conditioning
	ö		Water efficiency	Using water efficiently & ensuring that we have enough water to meet our needs
	U		Waste	Minimising waste during construction and during operation use
			Food security	Ensuring food security through adaptation of agriculture and food growing
			Landscape	Ensuring that trees and plants are selected to be resilient to a warmer and drier climate
	> 0		Availability	Increasing and adding to the network of green spaces
	£ŭ	Improving the green space network	Quality	Creating high-quality amenity space and encouraging healthy lifestyles through sport
Vers	S D		,	
	D G	Achieving biodiversity net gains in future developments	Buildings	Ensuring buildings themselves can support biodiversity, such as green roofs
	Biodiversity & Gr Space		Landscape	Ensuring landscape design can encourage biodiversity
-			Resilience	Supporting wildlife in the face of climate change, through creating resilient new habitats
			Light pollution	Reducing impact of light pollution on animal habitats
		Tree cover	Climate change	Increasing the tree cover to capture carbon and decrease the urban heat island effect
			ennine enange	increasing the nee cover to captore carbon and decrease the troat theat taking enect
	L L	Involving communities in planning for their future	Engagement	Ensuring communities are involved in decision-making & proposals respond to local views
			Job diversity	Encourage the development of a wide range of jobs
(<u>9</u> . &		Social, Inclusive & Safe Places	Creating places and mixed communities that promote social interaction
	D S		Accessibility	Supporting places & buildings that meet a variety of needs - incl people w disabilities
	č –		Ageing population	Enabling people to live healthy and long lives in their own homes
	Ξŭ	Encouraging healthy lifestyles	Healthly lifestyles	Supporting healthy lifestyles by provision of green spaces and sports facilities
	Wellbeing & Social Inclusion		Mental health	Tackling mental health by creating places with natural sociability and access to nature
			Food	Ensuring shops and services, like allotments, ensure access to healthy affordable food
		Air quality and more	Air quality	Ensuring high levels of indoor and outdoor air quality
			Daylighting	Providing good levels of natural daylighting to support visual, mental & biological health
			Noise	Ensuring appropriate noise levels and minimising construction noise/vibration
			Heritage	Balancing heritage protection with the demands of growth
Ī	es		Historic buildings	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded
Ī	Ices	Protecting the best of what already exists	Historic buildings Public access	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded Balancing public access to heritage with protecting sensitive sites from harm
	aces	Protecting the best of what already exists	Historic buildings Public access Landscape	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded Balancing public access to heritage with protecting sensitive sites from harm Sustaining historic landscapes while increasing biodiversity
	Places	Protecting the best of what already exists	Historic buildings Public access Landscape Climate change	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded Balancing public access to heritage with protecting sensitive sites from harm Sustaining historic landscapes while increasing biodiversity Helping historic buildings adapt to climate change whilst maintaining their heritage value
	at Places	Protecting the best of what already exists	Historic buildings Public access Landscape Climate change Local character	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded Balancing public access to heritage with protecting sensitive sites from harm Sustaining historic landscapes while increasing biodiversity Helping historic buildings adapt to climate change whilst maintaining their heritage value Protecting local distinctiveness and character
	eat Places	Protecting the best of what already exists	Historic buildings Public access Landscape Climate change Local character New places	Balancing heritage protection with the demands of growth Ensuring that historic buildings have viable uses, so they can be safeguarded Balancing public access to heritage with protecting sensitive sites from harm Sustaining historic landscapes while increasing biodiversity Helping historic buildings adapt to climate change whilst maintaining their heritage value Protecting local distinctiveness and character Creating outstanding new buildings and landscapes

We have appraised each scenario against its potential to deliver on the Councils' four 'big themes' and three priorities - jobs, infrastructure and homes.

Conclusion

The site represents an opportunity to provide a commercial-led scheme in a highly accessible location; a location that has a proven track-record to attract high calibre businesses. A high-tech Artificial Intelligence cluster has already formed in the adjacent new commercial buildings; attracted by modern, efficient floorspace and the well-evidenced benefits of clustering.

The site is the last piece of Station Road that does not have a long-term vision for how it should respond to Area of Major Change Policy and the major development changes that are occurring to the Station area. It is also an underused asset in one of the most accessible and sustainable locations in Greater Cambridge and it is therefore appropriate for the emerging Local Plan to include the site for development.

The benefits of development

The three development scenarios presented in this document represent the wide-ranging opportunities that the site offers; from doing nothing to full redevelopment.

The scenario assessment clearly demonstrates that Scenario 1 'doing nothing' means there is little opportunity for the site to contribute to the key issues raised in the new Local Plan consultation, in particular in relation to jobs and the economy.

The comprehensive redevelopment of the site, as explored in Scenarios 2 and 3, have the potential to deliver a wide range of benefits, from creating a range of new jobs and boosting the local economy to spearheading the move to a net zero-carbon society. Each scenario has its pros and cons, but the greater the development, the greater the benefits for job creation and forming sustainable development in this highly accessible location.

The Council has recognised the climate emergency and aspires to move to a net zero carbon society. To achieve this, it should prioritise those developments that can maximise long-term sustainable benefits balanced against other issues. While redevelopment would result in increased emissions overall (embodied and operational) - due to the increase in the number of people working on the site - it also offers the opportunity to significantly reduce operational carbon intensity per person on the site.

Not only that, but there is considerable demand for quality workplaces in Cambridge and the redevelopment of Station Road presents an excellent opportunity to meet that demand sustainably particularly considering that the market is likely to respond to the demand somewhere in the city: The use of this previously developed land, its proximity to major transport infrastructure, the opportunity to utilise renewable technologies, potential air quality improvements, reductions in vehicle movements, encouraging active travel, a biodiversity net gain, better control of surface flooding, improved public realm, and creation of jobs both in construction and operation, has the potential to deliver one the most sustainable developments in Cambridge.

The development potential held by the site therefore offers the opportunity to achieve a number of significant benefits, including:

- To increase the GVA contribution from circa £9 million from the existing buildings to £85 million from a full redevelopment;
- To increase the number of jobs (full time equivalent) from 170 jobs to 1,800 jobs
- To achieve significant public realm benefits to Station Road – including major enhancements for pedestrians and cyclists as a major thorough-fare to Cambridge Station;
- To increase the amount of public open space

facing Station Road, from what is currently a completely private and walled site;

- To reduce car parking in a city centre location and encourage more sustainable forms of travel;
- To reduce the operational carbon intensity fourfold per employee on the site (CO2e/FTE) from 0.75 for the existing buildings down to 0.18 through a modern redevelopment;
- To deliver bespoke high-quality architecture; with a landowner that wishes to engage with stakeholders and provide architecture that will be a legacy to be proud of; and
- To deliver 10% net biodiversity gain.

Development has the potential to deliver significant public realm benefits to Station Road

Benefits arising from development include:

- Delivering **a lasting legacy** for the long-term future of the City Centre Opportunity Area
- Significant improvements to the public realm with new areas of landscaping
- Ensuring a net environmental gain and the retention of many trees
- Encouraging sustainable modes of travel through significant reduction in car parking
- Provision of high quality architecture and improvements to the townscape
- Targeting exemplar sustainability standards that acknowledge the climate emergency

- Making the **best and efficient use** of brownfield land in a highly accessible location
- Supporting the **local economy** including the aspiration to double the regional economy
- Meeting an identified, local need for modern, Grade A commercial offices
- Creating **a range of jobs** and flexible floorplates to attract a range of employers
- Supporting an established, world-class AI, science and bio-medical **technology cluster**
- Creating 'good growth' by promoting wellbeing and social inclusion through provision of a range of social infrastructure
