## 1 Introduction

- 1.1 EAS has been commissioned by the Varrier-Jones Foundation to prepare a Site Appraisal for land to the east of Stirling Way, Site C, Papworth Everard, Cambridgeshire. This document has been prepared to inform site representations to the Greater Cambridge Local Plan Regulation 18 Issues and Options consultation. The contents of this report form a preliminary assessment of the site in terms of highways and transport.
- 1.2 Site C is located to the east of the existing Papworth Business Park and is surrounded by arable land on the south and east with the former Papworth hospital to the north.
- 1.3 The 13ha site is currently mostly greenfield with a hospital car park in the north west of the site, a location plan is contained within **Appendix A**. For the purposes of this report it is proposed that the site will comprise of a commercial development as an extension to the existing Papworth Business Park.
- 1.4 This report is set out as follows:
- Section 2 – sets out the relevant policy background.
  - Section 3 – reviews the existing Papworth Everard settlement facilities, transport network and travel characteristics.
  - Section 4 - discusses the site proposals including accessibility to Papworth Everard and the wider network.
  - Section 5 - sets out the likely transport implications.
  - Section 6 – summarises the findings of the report.

## 2 Policy background

### Introduction

- 2.1 This section sets out the policy context for the proposed development at national and local level. Sustainable development is to be achieved by encouraging walking, cycling and public transport use.

### National Planning Policy Framework (NPPF) (2019)

- 2.2 The revised National Planning Policy Framework was published in February 2019 and sets out the government's planning policies for England and how these are expected to be applied. The revised Framework replaces the previous National Planning Policy Frameworks published in March 2012 and July 2018.

- 2.3 The purpose of the planning system is to contribute to the achievement of sustainable development. At a very high level, the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs.

- 2.4 In respect of that, Paragraph 10 of the NPPF states:

*So that sustainable development is pursued in a positive way, at the heart of the Framework is a presumption in favour of sustainable development.*

- 2.5 Section 9 of the NPPF relates to promoting sustainable transport and paragraphs 102 to 104 say:

*102. Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:*

*a) the potential impacts of development on transport networks can be addressed;*

*b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;*

*c) opportunities to promote walking, cycling and public transport use are identified and pursued;*

*d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains; and*

*e) patterns of movement, streets, parking and other transport considerations are integral to the design of schemes, and contribute to making high quality places.*

*103. The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport*

*solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making.*

*104. Planning policies should:*

- a) support an appropriate mix of uses across an area, and within larger scale sites, to minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities;*
- b) be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned;*
- c) identify and protect, where there is robust evidence, sites and routes which could be critical in developing infrastructure to widen transport choice and realise opportunities for large scale development;*
- d) provide for high quality walking and cycling networks and supporting facilities such as cycle parking (drawing on Local Cycling and Walking Infrastructure Plans);*
- e) provide for any large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy. In doing so they should take into account whether such development is likely to be a nationally significant infrastructure project and any relevant national policy statements; and*
- f) recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time – taking into account their economic value in serving business, leisure, training and emergency service needs, and the Government’s General Aviation Strategy.*

2.6 Paragraphs 105 and 106 discuss parking standards:

*105. If setting local parking standards for residential and non-residential development, policies should take into account:*

- a) the accessibility of the development;*
- b) the type, mix and use of development;*
- c) the availability of and opportunities for public transport;*
- d) local car ownership levels; and*
- e) the need to ensure an adequate provision of spaces for charging plug-in and other ultra-low emission vehicles*

*106. Maximum parking standards for residential and non-residential development should only be set where there is a clear and compelling justification that they are necessary for managing the local road network, or for optimising the density of development in city and town centres and other locations that are well served by public transport (in accordance with chapter 11 of this Framework). In town centres, local authorities should seek to improve the quality of parking so that it is convenient, safe and secure, alongside measures to promote accessibility for pedestrians and cyclists.*

2.7 Paragraphs 108 to 111 state that, when considering development proposals in relation to transport:

*108. In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:*

*a) appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its location;*

*b) safe and suitable access to the site can be achieved for all users; and*

*c) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree.”*

*109. Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.”*

*110. Within this context, applications for development should:*

*a) give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use;*

*b) address the needs of people with disabilities and reduced mobility in relation to all modes of transport;*

*c) create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclists and vehicles, avoid unnecessary street clutter, and respond to local character and design standards;*

*d) allow for the efficient delivery of goods, and access by service and emergency vehicles; and*

*e) be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations.”*

*111. All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a transport statement or transport assessment so that the likely impacts of the proposal can be assessed.*

### **The Cambridgeshire Local Transport Plan (LTP3) 2011-2031**

2.8 **The Cambridgeshire Local Transport Plan (LTP3) seeks to address existing transport challenges as well the needs generated by new development, and plan for the delivery of new transport infrastructure, such as road improvements. This third LTP comprises 3 documents:**

- Policies and Strategies (2018)
- The Long-Term Transport Strategy (July 2015) (previously the Implementation Plan)

- The Transport Delivery Programme (updated annually).

2.9 LTP3 addresses the County Council's latest priorities, as well as strategic objectives carried forward from LTP2. These are:

- Supporting and protecting people when they need it most
- Helping people to live independent and healthy lives in their communities
- Developing our local economy for the benefit of all
- Enabling people to thrive, achieve their potential and improve quality of life
- Supporting and protecting vulnerable people
- Managing and delivering the growth and development of sustainable communities
- Promoting improved skills levels and economic prosperity across the county, helping people into jobs and encouraging enterprise
- Meeting the challenges of climate change and enhancing the natural environment

2.10 The Cambridgeshire Long Term Transport Strategy 2011-2031 identifies the major infrastructure requirements that are needed to address existing problems and capacity constraints on Cambridgeshire's transport network, and the further infrastructure that is required to cater for the transport demand associated with planned growth. It includes the following schemes will improve the connectivity of Papworth Everard:

- Strategic and local cycle network improvement between Huntingdon-Papworth Everard-Cambourne.
- Area action plans for the A14 Trunk Road in Huntingdonshire and South Cambridgeshire delivering
  - New A14 trunk road, local road capacity, cycle and pedestrian routes.
- Area action plan for the A428 Trunk Road in Huntingdonshire and South Cambridgeshire. This includes
  - A428 Caxton Gibbet to Black Cat dualling by 2021, including a grade separated junction at the A1 Black Cat roundabout.
  - Bus priority measures Caxton Gibbet – West Cambourne, A428 to Bourne airfield
  - A428 park and ride
  - A428 and A1198 junction improvements

#### **The South Cambridgeshire Local Plan (2018)**

2.11 **Policy HQ/1 on Design Principles** states that all new development must be of high quality design, with a clear vision as to its positive contribution to its local and wider context. As regards transport, proposals must:

- Achieve a permeable development with ease of movement and access for all users and abilities, with user friendly and conveniently accessible streets and other routes both within the development and linking with its surroundings and existing and proposed facilities and services, focusing on delivering attractive and safe opportunities for walking, cycling, public transport and, where appropriate, horse riding;
- Provide safe and convenient access for all users and abilities to public buildings and spaces, including those with limited mobility or those with other impairment such as of sight or hearing;
- Ensure that car parking is integrated into the development in a convenient, accessible manner and does not dominate the development and its surroundings or cause safety issues; and
- Provide safe, secure, convenient and accessible provision for cycle parking and storage, facilities for waste management, recycling and collection in a manner that is appropriately integrated within the overall development.

2.12 **Policy TI/2 on Planning for Sustainable Travel** states that development must be located and designed to reduce the need to travel, particularly by car, and promote sustainable travel appropriate to its location. Planning permission will only be granted for development likely to give rise to increased travel demands where the site has (or will attain) sufficient integration and accessibility by walking, cycling or public and community transport, including:

- Provision of safe, direct routes within permeable layouts that facilitate and encourage short distance trips by walking and cycling between home and nearby centres of attraction, and to bus stops or railway stations, to provide real travel choice for some or all of the journey, in accordance with Policy HQ/1 above;
- Provision of new cycle and walking routes that connect to existing networks, including the wider Rights of Way network, to strengthen connections between villages, Northstowe, Cambridge, market towns, and the wider countryside;
- Protection and improvement of existing cycle and walking routes, including the Rights of Way network, to ensure the effectiveness and amenity of these routes is maintained, including through maintenance, crossings, signposting and waymarking, and, where appropriate, widening and lighting;
- Provision of secure, accessible and convenient cycle parking in accordance with Policy TI/3 below;
- Securing appropriate improvements to public and community transport (including infrastructure requirements) in accordance with the aims of the Cambridgeshire Local Transport Plan and South Cambridgeshire Community Transport Strategy.

2.13 The Policy also requires developers to demonstrate they will make adequate provision to mitigate the likely impacts (including cumulative impacts) of their proposal including environmental impacts (such as noise and pollution) and impact on amenity and health. This will be achieved through direct improvements and Section 106 contributions and/or the Community Infrastructure Levy (CIL), to address transport infrastructure in the wider area including across the district boundary.

- 2.14 Developers of larger developments (i.e. with over 20 dwellings), or where a proposal is likely to have significant transport implications, will be required to demonstrate they have maximised opportunities for sustainable travel and will make adequate provision to mitigate the likely impacts through provision of a Transport Assessment and Travel Plan. All other developments will be required to submit a Transport Statement. Where a Transport Assessment or Statement or a Travel Plan is required, a Low Emissions Strategy Statement should be integrated.
- 2.15 Travel Plans must have measurable outputs, be related to the aims and objectives in the Local Transport Plan and provide monitoring and enforcement arrangements. Planning obligations may be an appropriate means of securing the provision of some or all of a Travel Plan, including the requirement for an annual monitoring and progress report. Submission of area-wide Travel Plans will be considered in appropriate situations. Outline planning applications are required to submit a framework for the preparation of a Travel Plan.
- 2.16 **Policy TI/3 on Parking Provision** states that parking should be provided through a designed approach in accordance with the standards reproduced in Table 3.1.

Use	Indicative car parking provision	Minimum cycle parking provision	Notes
B1: business	1 space per 25sqm under 2500sqm, 1 space per 30sqm over 2500sqm	1 space per 30sqm	
B2: General Industrial	1 space per 50sqm	1 space per 40sqm	
B8: Storage and Distribution	1 space per 100sqm	On merit	Provision should take account of duration of storage

**Table 3.1: Employment parking standards (South Cambridgeshire Local Plan 2018, Figure 11)**

- 2.17 Car parking provision will take into consideration the site location, type and mix of uses, car ownership levels, availability of local services, facilities and public transport, and highway and user safety issues, as well as ensuring appropriate parking for people with impaired mobility as set out in national standards and guidance.

#### **The Papworth Everard Village Design Guide (SPD Consultation Draft April 2019)**

- 2.18 This draft document has been prepared by South Cambs District Council with the local community of Papworth Everard. Community design priorities for the Village Design Guide includes:
- Protect and add to existing off-road paths and connections across the village, also to protect and add to the village's trees and hedgerows in a way that is right for the village.
- 2.19 Section 6 deals with Connections with key existing and proposed connections shown in Figure 12, reproduced in **Appendix B**. Paragraphs 6.1 to 6.3 state objectives for paths:
- "The pedestrian network within the village should be enhanced or added to wherever possible.*

*Paths should be as accessible as possible. Within developments and on routes intended for heavy pedestrian use (e.g. which might be used to reach school) this means wide (2m) tarmac or paved paths.*

*Proposals for new or enhanced paths should show how they integrate with the wider village network and how they enhance it.”*

## 3 Existing Site Assessment

### Introduction

- 3.1 Papworth Everard is a village of approximately 4,000 people in South Cambridgeshire, close to the border with Huntingdonshire. The village is set along Ermine Street which bisects the village and runs roughly 2km south to north. There is a roundabout at either end that provides access to the A1198 western bypass of the village.

### Site location

- 3.2 The site is located to the east of the existing Papworth Business Park and is surrounded by arable land on the south and east with the former Papworth hospital to the north.
- 3.3 The 13ha site (Site C) is currently mostly greenfield with a hospital car park in the north west of the site, a location plan is contained within **Appendix A**. For the purposes of this report it is proposed that the site will comprise of a commercial development with an extension to the existing Papworth Business Park.
- 3.4 The existing Papworth Business Park lies at the southern end of Papworth Everard and is served by an Industrial estate type road, Stirling Way that joins Ermine Street at a signal junction opposite Summers Hill Drive.

### Walking and cycle routes

- 3.5 There is an extensive walking network with Papworth Everard that connects the village centre to the surrounding residential areas and provides access into the surrounding countryside. The Papworth Everard Village Design Guide connections plan in **Appendix B** shows local rights of way.
- 3.6 At the centre of Papworth Everard is Pendrill Court on the eastern side of Ermine Street. There are footways on both sides of Ermine Street providing access northwards alongside Ermine Street North and southwards along Ermine Street South.
- 3.7 There are good quality wide footways on either side of Stirling Way throughout its length within the Papworth Business Park. These footways connect to the wider Papworth Everard footway network at the junction of Stirling Way with Ermine Street. There are pedestrian crossings at the signal junction to the south side of Ermine Street providing access directly into the Summers Hill housing estate.
- 3.8 There is a public bridleway from Ermine Street just to the south of its signal junction with Stirling Way, the Business Park access. The bridleway follows the south-western A1138 bypass that crosses the north-south footpath and then provides access west of Papworth Everard, crossing the A1138 bypass at the roundabout with the B1040.
- 3.9 All streets within Papworth Everard are suitable for cycling. There are cycle lanes along sections of Ermine Street and sections of the Ermine Street footways are designated for shared cycle use.

### Local bus services

- 3.10 There are bus stops along the length of Ermine Street serving Papworth Everard with the closest stops to the business park being 120m north of Stirling Way on Ermine Street.
- 3.11 The X3 and 8 bus services serve Papworth Everard, stopping along Ermine Street and providing services to Cambridge, Camborne and Huntingdon.
- 3.12 There are eight X3 bus services and two 8 bus services per day on weekdays and a total of seven Saturday services.

### Road connections and existing traffic conditions

- 3.13 Ermine Street through Papworth Everard is a single carriageway 30mph speed limit street with a width of circa 7m. There is a central 350m section centred on Pendrill Court with a speed limit of 20mph with traffic calming including road humps and speed activated warning signs. Ermine Street terminates north and south of Papworth Everard at roundabouts with the A1198 which provides a western bypass to the village.
- 3.14 Sterling Way joins Ermine Street just north of the southern by-pass roundabout at a signalised intersection that also provides an access to the Summers Hill housing estate. Stirling Way is 10.5m in width at the junction, with separate left and right turning lanes, narrowing to 7.3m within the estate.
- 3.15 The A1198 joins the A428 at the Caxton Gibbet roundabout 1.5km south of the village. The A4218 provides access to Cambourne and Cambridge eastwards and to St Neots, Bedford and Milton Keynes westwards. To the north, the A1198 joins the A14 at Huntingdon.
- 3.16 A site visit was made between 7am and 10am on Tuesday 28 January 2020 to observe typical morning peak traffic conditions. Observations were:
- There was little traffic within the village on Ermine Street within the morning peak hour with the exception of around 8:30am when there was some activity on Ermine Street and Varrier-Jones Drive during the morning drop off at Pendragon Primary School;
  - There were few queues observed at any junctions around Papworth Everard including:
    - The roundabout junction of A1198/B1040 and Ermine Street north of Papworth Everard;
    - The roundabout junction of A1198 bypass and B1040 west of Papworth Everard;
    - The roundabout junction of A1198 bypass and Ermine Street south of Papworth Everard; and
    - The signal junction between Ermine Street, Summers Hill Road and Stirling Way (Papworth Business Park).
  - There was queueing at the Caxton Gibbet A1198/A428 roundabout south of Papworth Everard from 7am until 9am including:
    - A queue of 1.5km extending back on the A1138 to the A1138/Ermine Street roundabout between 7:15 and 7:30;

- A queue on the A1138 from the Caxton Gibbet roundabout back towards Papworth Everard of approximately 750m at 7:45am to 8:00am, falling gradually to around 250m at 9am;
- Smaller queues on the eastbound approach of the A428 and northbound A1138 Caxton Gibbet roundabout approach over this time period of upto 100m; and
- No queueing on the westbound A428 approach.

3.17 Travel time surveys undertaken on the site visit gave an estimated 6 minutes to travel in the queue from the southern A1138 bypass roundabout to the A1138/A428 Caxton Gibbet roundabout at 7:30am when the queue was at its peak, and then approximately 3 minutes delay between 8 and 9am when the queue was roughly 50% of the peak distance.

3.18 In summary, the observations confirm that:

- the A1138 bypass has removed any traffic congestion from Papworth and this includes the Business Park signal junction between Ermine Street, Stirling Way and Summers Hill Drive which has significant spare capacity;
- the three bypass roundabouts have significant spare capacity; and
- the A428/A1138 Caxton Gibbet roundabout is operating at or over capacity in the morning peak with estimated delays on the A1138 southern arm of between 3 and 6minutes.

3.19 The signal junction provides access for all traffic to the Papworth Business Park. This had no queueing at any time during the site visit. The Stirling Road and Ermine Street approaches have been designed to accommodate large vehicles suitable for an industrial estate. This junction would have been in place prior to the Papworth Everard bypass and is designed to accommodate significantly greater levels of traffic than currently uses it.

#### **A14 improvements and traffic diversions through Papworth Everard**

3.20 The major works to improve the A14 between the Huntingdon and Cambridge north of Papworth Everard are ongoing. Significant sections of the new A14 have now opened but there are still road closures and diversions in place that are updated and change depending upon road works.

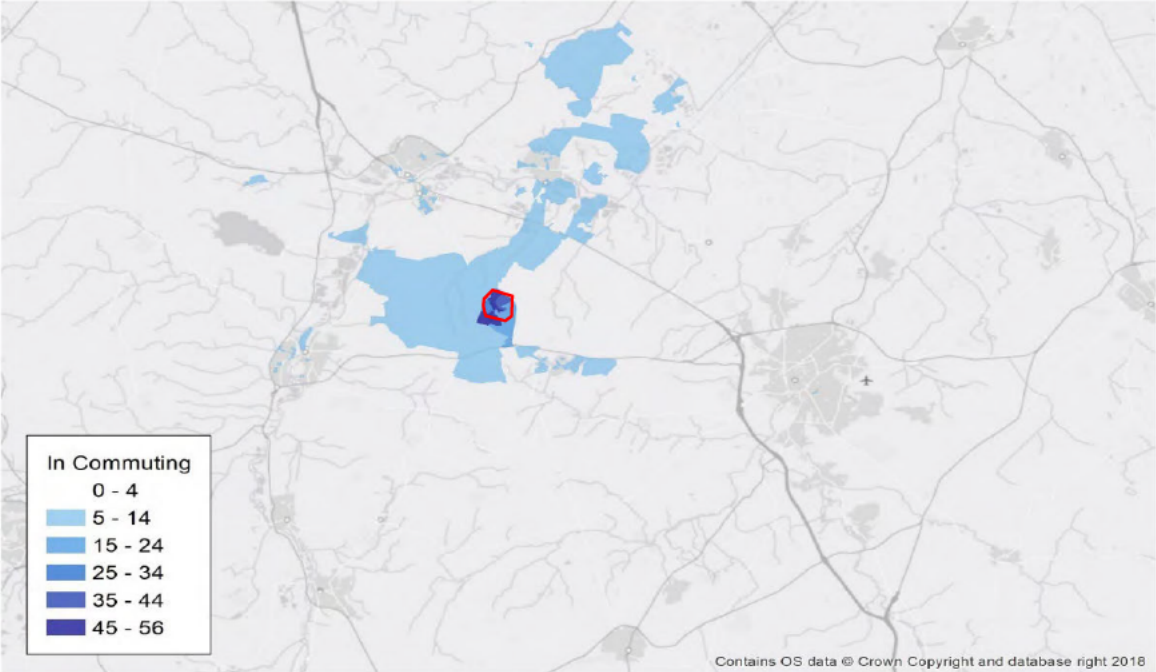

3.21 These diversions have significantly affected traffic in the Papworth Everard area and along the A428 corridor. One key diversion takes traffic from the A14 north of Cambridge via the A428 and the A1198 Papworth Everard bypass. These diversions continue to impact on local traffic. It is likely that even when there are no diversions in place, many drivers will still choose to use the diversion routes for a significant period. It is therefore expected that it will be some time after the works are complete before traffic will settle into an equilibrium with less queues and delays local to Papworth Everard.

3.22 For these reasons, no baseline traffic counts were undertaken for this assessment. An analysis has been carried out to estimate expected generated traffic, including an assignment based on Census travel to work data. Some conclusions are drawn regarding likely impacts based upon the site visit during the morning peak period described above, but these have been made based on the existing traffic conditions which are not typical of future, longer term traffic.

**Census data**

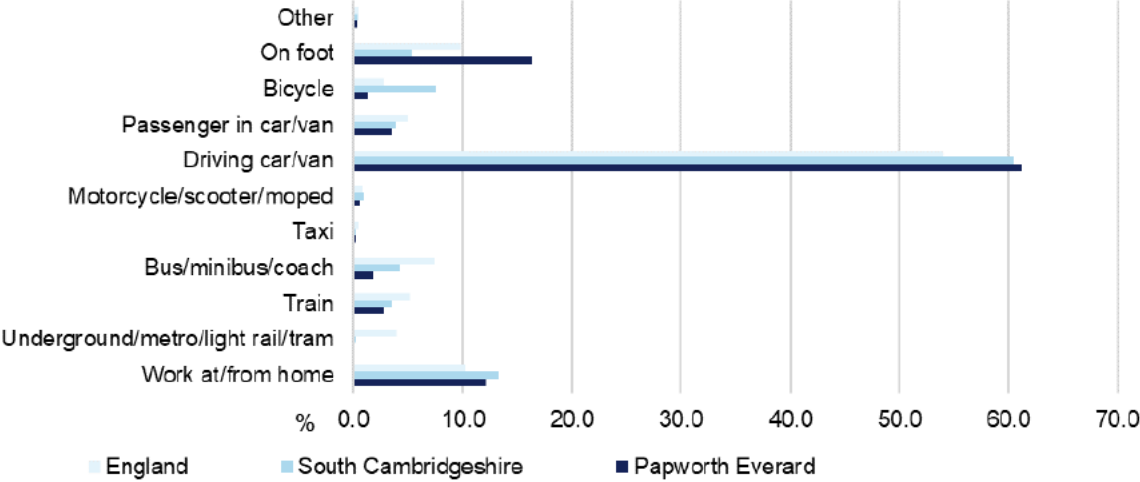

3.23 The census data has been used to provide an overview of commuter travel to and from Papworth. The data is from 2011, which is prior to Papworth hospital relocation to the Cambridge Biomedical Campus near Addenbrookes in Cambridge in 2019. It is also prior to a substantial increase in population due to new housing at Summers Hill. In 2015, Papworth hospital employed about 1500 staff.

3.24 **Figure 3.1** shows in commuting to businesses within Papworth Everard and it shows that some 13% of workplaces are filled by Papworth Everard residents. There are approximately 1.7 workplaces in the study area for every resident in employment. Of those commuting into the study area, clearly most come from the northeast. St Ives appears to be a particularly preferred location, possibly because of the B1040 providing good direct access across the A14 and lower house prices.

**Figure 3.1: In commuting to Papworth Everard, 2011 Census**

3.25 **Figure 3.2** shows the modes of travel to work in 2011.

**Figure 3.2: Mode of travel to work, 2011 Census**

3.26 **Figure 3.2** shows that just over 60% of residents travel to work by car with a further 5% as a passenger. A significant proportion of around 16% walk to work which is around three times the average in the district. Relatively few commute by bus or train.

## 4 The proposed development

### Introduction

- 4.1 It is proposed to develop Site C for commercial development as an extension of the existing Papworth Business Park.
- 4.2 No masterplan has yet been produced. This assessment is based upon an assumed one third developed floorspace, one third hardstanding including roads and car parks, and one third landscaping.

### Pedestrian and cycle access

- 4.3 Pedestrian and cycle links would join the existing Papworth Business Park links.

### Vehicle access

- 4.4 Vehicle access will be provided via Stirling Way. The proposed access link would be designed to the same standards as Stirling Way.
- 4.5 No improvements are proposed to the Stirling Way signal junction which is designed to accommodate significantly greater traffic levels than currently observed. The junction has pedestrian phases to allow pedestrian movements across both Ermine Street and Stirling Way.

### Parking

- 4.6 Car and cycle parking will be provided in accordance with the standards in the South Cambridgeshire Local Plan (2018) unless agreed otherwise with the Planning Authority at a Reserved Matters stage.

## 5 Transport impact

### Introduction

- 5.1 This section provides an overview of expected traffic generated by the proposed development and the likely distribution on the local road network.
- 5.2 The assessment assumes a 30% developable area.

### Trip generation forecasting

- 5.3 The TRICS database was used to estimate person trip rates for an Industrial Estate. The site area is 13Ha and at a development rate of 30% of the area, this would equate to 39,000m<sup>2</sup> of site coverage. Table 5.1 shows the vehicle trip rates obtained and the estimated trip numbers for this site area. **Appendix C** shows the full TRICS output.

	08:00 – 09:00			17:00 – 18:00			07:00 – 19:00		
	In	Out	Total	In	Out	Total	In	Out	Total
Trip rates	0.156	0.065	0.221	0.045	0.119	0.164	2.004	1.604	3.608
Trips	61	25	86	18	46	64	782	626	1407

**Table 5.1: Vehicle trip rates and trips for 39,000m<sup>2</sup> of Industrial Estate (TRICS 7.5.4)**

- 5.4 Table 5.1 shows that expected vehicle trips would be of the order of 86 in the morning peak, 64 in the evening peak and 1407 daily.

### Assigning the development traffic

- 5.5 No assignment of traffic has been undertaken at this stage. However, the majority of the traffic would be assigned to the bypass with traffic travelling against the main existing local traffic peak directions.
- 5.6 A proportion of the traffic would be internal to Papworth Everard with an element of traffic likely to come from Site A, the proposed new housing site.

### Impact on the junctions

- 5.7 No impact assessments have been undertaken as no baseline or existing traffic counts were possible due to the A14 diversions in place resulting in abnormal local traffic conditions. However, all trips will use the existing signal junction of Ermine Street with Stirling Way and the majority of trips will use the bypass junctions. Most traffic will be coming into site in the morning and leaving in the evening, against the general flow of commuter traffic and so is not expected to significantly impact upon existing local junction congestion.
- 5.8 The existing Stirling Way/Ermine Street/Summershill Drive has significant spare capacity, sufficient to accommodate the expected additional traffic generated by the development.

## 6 Summary and conclusions

### Summary

- 6.1 This document has been prepared to inform site representations to the Greater Cambridge Local Plan Regulation 18 Issues and Options consultation. The contents of this report form a preliminary assessment of Papworth Everard site C in terms of highways and transport.
- 6.2 The site is located to the east of Stirling Way. The 13ha site is currently greenfield. For the purposes of this report it is proposed that the site will comprise commercial development with a footprint of 30% of the area which equates to approximately 39,000m<sup>2</sup> of industrial estate use.
- 6.3 Papworth Everard has good existing pedestrian and cycle provision and the site can link to existing footways and cycleways via Stirling Way.
- 6.4 Vehicle access will continue via Stirling Way onto Ermine Street using the existing signal junction.
- 6.5 All new vehicle trips generated by the development will use the Stirling Way/Ermine Street signal junction. This has significant existing capacity and is expected to be able to operate within capacity with the new development. The majority of new vehicle trips will access Papworth Everard bypass and these will be travelling against typical peak traffic and so will not significantly impact on existing peak hour local congestion.

### Conclusion

- 6.6 Papworth Everard is a sustainable settlement and site C has good connections to the village and its facilities. The proposed business park extension will help further enhance local commuting with Papworth Everard, offering a sustainable extension to the existing Papworth Business Park. Site C is therefore a sustainable location suitable for the proposed business park extension.

## 7 Appendices

Appendix: A - Location plan  
Appendix B: Village Design Guide connections plan  
Appendix C – TRICS Data

**Appendix: A - Location plan**

- LEGEND**
- Red line boundaries (A,B and C)
  - Existing roads
  - Drainage channel
  - Existing Public Rights of Way
  - Conservation Area
  - Existing woodland
  - Existing significant woodland / SSSI
  - Existing informal open space
  - Scheduled ancient monument
  - Overhead electricity line
  - Existing allotments
  - Protected amenity
  - Pendragon Community Primary School
  - Existing LAP and 100m isochrone
  - Grade II Listed Building

## TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
 Category : D - INDUSTRIAL ESTATE  
 MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON	
	HD HILLINGDON	1 days
	HO HOUNSLOW	1 days
02	SOUTH EAST	
	ES EAST SUSSEX	2 days
	EX ESSEX	3 days
	KC KENT	1 days
03	SOUTH WEST	
	BR BRISTOL CITY	2 days
	CW CORNWALL	1 days
	DV DEVON	1 days
	WL WILTSHIRE	1 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
06	WEST MIDLANDS	
	HE HEREFORDSHIRE	1 days
	WK WARWICKSHIRE	2 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	WY WEST YORKSHIRE	4 days
08	NORTH WEST	
	LC LANCASHIRE	1 days
09	NORTH	
	TW TYNE & WEAR	1 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

## Secondary Filtering selection:

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Gross floor area  
 Actual Range: 1138 to 974258 (units: sqm)  
 Range Selected by User: 1138 to 974258 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/11 to 17/10/18

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

Selected survey days:

Monday	5 days
Tuesday	8 days
Wednesday	5 days
Thursday	4 days
Friday	4 days

*This data displays the number of selected surveys by day of the week.*

Selected survey types:

Manual count	26 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.*

Selected Locations:

Edge of Town Centre	1
Suburban Area (PPS6 Out of Centre)	9
Edge of Town	15
Neighbourhood Centre (PPS6 Local Centre)	1

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

Secondary Filtering selection:

Use Class:

Not Known	3 days
B1	10 days
B2	9 days
B8	4 days

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.*

Population within 1 mile:

1,000 or Less	1 days
1,001 to 5,000	1 days
5,001 to 10,000	5 days
10,001 to 15,000	6 days
15,001 to 20,000	1 days
20,001 to 25,000	1 days
25,001 to 50,000	9 days
50,001 to 100,000	2 days

*This data displays the number of selected surveys within stated 1-mile radii of population.*

Population within 5 miles:

25,001 to 50,000	4 days
50,001 to 75,000	1 days
75,001 to 100,000	3 days
125,001 to 250,000	13 days
250,001 to 500,000	3 days
500,001 or More	2 days

*This data displays the number of selected surveys within stated 5-mile radii of population.*

Car ownership within 5 miles:

0.6 to 1.0	10 days
1.1 to 1.5	15 days
1.6 to 2.0	1 days

*This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.*

Travel Plan:

Yes	1 days
No	25 days

*This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.*

PTAL Rating:

No PTAL Present	24 days
1b Very poor	1 days
2 Poor	1 days

*This data displays the number of selected surveys with PTAL Ratings.*

<b>Total Rates:</b>			2.004	90.720			1.604	72.591			3.608	163.311

*This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.*

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. #### Parameter summary

Trip rate parameter range selected:	1138 - 974258 (units: sqm)
Survey date date range:	01/01/11 - 17/10/18
Number of weekdays (Monday-Friday):	26
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	0

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

*This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.*

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.*

<b>Total Rates:</b>			0.291	13.081			0.196	8.848			0.487	21.929

*This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.*

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.*

<b>Total Rates:</b>			3.088	139.676			2.431	110.071			5.519	249.747

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

TRIP RATE for Land Use 02 - EMPLOYMENT/D - INDUSTRIAL ESTATE  
 MULTI-MODAL Servicing Vehicles

Calculation factor: 100 sqm

Estimated TRIP rate value per 4525 SQM shown in shaded columns

BOLD print indicates peak (busiest) period
